Developmental Vision
Examinations for Children

Developmental Behavioural and developmental vision examinations include assessments for:

- Reading and learning difficulties
 - Visual perception and developmental disorders
 - Visual stress and Colourimetry (precision tinted lenses)
1. Children's vision examinations include assessment of:
 - Eye movement control
 - Focusing and eye teaming skills
 - Cycloplegic refraction
 - Stereo acuity
 - Colour vision
 - Eye and hand dominance
 2. Visual perceptual and developmental assessments include assessment of:
 - Visual processing of information (does your child process information correctly and recall it efficiently)
 - Sequencing
 - Auditory analysis
 - Fine motor skills, spatial awareness and recommendations on posture and pencil grip
 - Midline, vestibular development and childhood reflexes

Colourimetry

Colourimetry assessment assists in prescribing specific tints and overlays for reading difficulties and visual stress.

Discussions include impact of computers and electronic games on learning, hydration, tint/contrast sensitivity / glare sensitivity and UV protection.
