

TWIST 'N LOC WATER PURIFIER

A neat and compact, space saving, under-sink water purifier that's ideal for use in the home or caravan. It's also the perfect water filter for coffee machines, ice makers... and in fact, for any beverage maker or outlet that needs the supply of clean, fresh drinking water.

Available in single or twin systems that filter most of the nasties out of your water which helps keep them out of your system!

A Twist 'n Loc water purifier is the affordable, efficient way to reduce the harmful contaminants in your water supply. Helps remove bad taste and odours, dirt, rust, slime, algae, toxins, solvents, herbicides, pesticides, chlorine and cysts such as Giardia and Cryptosporidium.

Long life cartridges can be changed in seconds thanks to the unique Twist 'n Loc system. Simply twist off, dump the old cartridge, lock on a new one... and off you go! Fresh, clean water is as simple as 'Twist 'n Loc'.

The Twist 'n Loc series from Alpine Water Filtration is the ultimate in user-friendly, in-line water purifiers.

FOR THE TECHNICALLY MINDED

Twist 'n Loc under-sink systems are supplied with pressure limiting back-flow prevention valve, inlet connectors, brass tee, high pressure food grade tubing and dual-action, long reach faucet.

An optional valved head is available which automatically turns off the water supply when the cartridge is disconnected - there's no need to turn off the water main.

The Twist 'n Loc cartridge complies with AS/NZS3497:1998 clause 5.2 and NSF Standard 42. One micron: nominal cyst reduction.

ALPINE WATER FILTRATION
